QUBICAAMF LANES

SUPERIOR PERFORMANCE LANES FOR SCORABILITY. EYE-POPPING ENTERTAINMENT LANES FOR FUN. QUBICAAMF HAS WHAT YOUR CUSTOMERS DEMAND.

THE LOOK, THE SURFACE, THE DURABILITY.
SUPERIOR IN EVERY WAY.

Superior Performance Lanes incorporate QubicaAMF's exclusive "Brush Finish Technology", which creates a lower surface tension to hold oil patterns in place and very unique friction properties to produce better ball reaction, more pin falls and higher scores. The same Brush Finish technology used on our HPL Lanes is now built into our SPL Lanes to deliver the same level of high-scoring performance your customers are sure to notice!

THE BIGGEST "WOW" EXPERIENCE IN BOWLING UNDER BLACK LIGHTS.
MAD Lanes give your customers the most entertaining, glow-in-the-dark fun in bowling with their eye-popping, unique designs. Create that "WOW" experience that will drive customers back to your center.

Whichever your choice, your center will have incredibly long-wearing synthetic lanes that perform consistently day in and day out. The first time a customer bowls on one of these lanes will be a memorable experience - and one they'll want to return for again and again.

QubicaAMF uses GREENGUARD Certified laminates which are scientifically tested to the GREENGUARD Standards for Low Emitting Products, significantly reducing levels of indoor air pollution.

SPL Lanes

SUPERIOR LOOK. SUPERIOR SURFACE. SUPERIOR DURABILITY. SUPERIOR PERFORMANCE LANES BY QUBICAAMF ... THE BEST PREMIUM LANE AVAILABLE PERIOD!

If you demand the ultimate in a premium lane then look no further than Superior Performance Lanes by QubicaAMF. The SPL lane we offer today is a result of over 20-years experience in the synthetic lane business and in keeping with our rich heritage of producing the best synthetic lane products in the industry. When you and your customers want the ultimate in lane performance, QubicaAMF SPL lanes are the only choice.

THE LOOK

SPL lanes have the warm and rich look reminiscent of real maple wood lanes. The unique light and dark board patterns on SPL Lanes are pleasing on the eye and give the bowler a point of reference to line up and target against. SPL lanes are the only lanes in the industry that use matching wood grain plugs to cover the screws and blend into the lane; competitor products use plastic plugs that look unnatural.

THE SURFACE

The surface properties of a lane affect how well it will hold oil patterns without breaking down, how well balls react, and ultimately, how well it scores.

The surface on SPL is unique because it is created by a process called **Brush Finishing** which is EXCLUSIVE to QubicaAMF and SPL. Brush Finishing is an extra step QubicaAMF incorporates into the lane manufacturing process where the lane panels are passed through a finishing machine that puts controlled directional microscopic abrasions on the lane surface. The surface on most synthetic lanes is created by molding the texture into the lane panel during the fabrication process. Brush Finishing produces lower surface tension and higher friction properties than is achievable with the molded process used by leading competitors.

- SPL's low surface tension ensures oil patterns stay in place better before breaking down.
- The "directional" friction properties achieved with the Brush Finishing ensures a higher coefficient of friction going across the lane versus going down the lane. This means that when the ball exits the oil on an SPL lane it "grabs" the lane surface better and transfers more energy into the pocket, which in turn leads to more pin fall and higher scores.
- The performance benefits of the brush finish used on SPL are real and proven. It is the same surface used on HPL lanes.

THE DURABILITY

SPL lanes have been designed to provide years of trouble-free operation.

- **NEW!** Increased protective wear layer on SPL provides the highest wear resistant lane surface on the market; 47% higher than leading competitor.
- **NEW!** The ends of every SPL panel are sealed with a protective coating that makes it resistant to moisture.
- Based on extensive impact testing, QubicaAMF has optimized the thickness of each SPL lane panel at 3/8" (9.53mm).

TABER WEAR RESISTANCE TEST RESULTS (Industry Standard)

Synthetic Lane Product	Taber Test Results
SPL Lanes	12,000 revolutions
Leading Competitor	6,400 revolutions

PANEL CONFIGURATION

- Each lane panel is 12 ft. (365.76cm) in length.
- The first lane seam is 12 ft. (365.76 cm) from the foul line so there are no seams in the action.

EXPLOSIVE INTERLOCKING PIN DECK

- Thick, high density pin deck provides explosive pin action for higher scores.
- Last lane panel overlaps pin deck for secure attachment.

GLow TRACK OPTION

The QubicaAMF Glow Track option adds colorful excitement when you turn on the black lights, helps bowlers find their targets, and is not distracting or tiring on the eye like many competitive glow patterns.

A TRUE STORY Of customer satisfaction

Since installing SPL lanes our bowlers, on average, are achieving much higher scores than they ever did before. This past season was our first league season with the SPL lanes and we had 17 "300 games" and 6 "800 Series" were bowled...just incredible! SPL lanes, with their brush finish, really hold consistent oil patterns. The durability of the SPL lanes is great too - our lanes look just as good as the day they were installed!

In addition, we've seen an increase in bowlers over the past year. Our open play has really picked up and we're adding a few more leagues for this upcoming season. I think this is partly due to the "freshness" of having updated our center with SPL lanes and the higher scores our bowlers are experiencing. It's been a win-win situation for our center and our bowlers."

CARL MARINELLIE, OWNER
HILL VIEW BOWLING, PA
40 Lanes.

LOW MAINTENANCE

SPL lanes do not require any resurfacing or repair, greatly reducing maintenance costs compared to wood lanes.

QUALITY MANUFACTURING

SPL lane panels are cut, drilled, and packed using state of the art CNC machines, manufacturing process controls and quality techniques at the QubicaAMF manufacturing facility in Richmond, VA USA.

ULTRASLIDE APPROACH

ULTRASLIDE APPROACH IS EVERYTHING YOU AND YOUR CUSTOMERS WANT IN A SYNTHETIC APPROACH, AND MORE.

UltraSlide, developed in conjunction with a specialist in surface technology, is the smoothest sliding, most durable synthetic approach for today's entertainment and sport facilities. UltraSlide delivers big in a number of important ways:

- Provides a consistent slide across its entire surface
- Has a textured surface with a similar roughness to wood - twice as close to wood as the nearest competing synthetic approach
- The higher surface roughness of UltraSlide makes for better slide performance

Synthetic Approach Product	Average Surface Roughness (µm)
UltraSlide	3.04
Leading Competitor	2.75

- 5' wide seamless approach
- Comes standard with SPL lanes that are ordered with approach
- Available as an approach upgrade to go with your existing lanes

A TRUE STORY Of customer appreciation

I just wanted to drop you a note and let you know how happy we are with our new UltraSlide Approaches. In my 30+ years of traveling all around the world as a bowler and instructor, I never thought that a synthetic approach could play like a wood approach. The new UltraSlide Approach has proven me wrong. It is amazing!!!

I have been overwhelmed lately with customers expressing their appreciation, approval, and enjoyment after bowling on these approaches. Men, women, kids, seniors, low-average, high-average, the comments are all the same... EVERYONE LOVES THEM!!!

Besides being absolutely beautiful and easy to maintain, our customers have all said the same thing, the UltraSlide Approach behaves JUST LIKE WOOD! The slide is true and smooth. The 'uncertainty' of the slide of our old approaches has been eliminated. As an added benefit, I believe the scoring potential has somehow been improved, as many of our high-skilled players (including current Team USA members, current PBA members, and a past QubicaAMF Bowling World Cup champion) have indicated that the improved footing and slide has actually improved their scores. Two days after the install, we have seen the new season high and several 300 games, without any other change in the center, other than the approaches.

I wholeheartedly believe that a new standard in lane surfaces has been created by the UltraSlide Approach. This approach will become the standard that all other synthetic approaches are judged against. Kudos to you and your staff in their development!

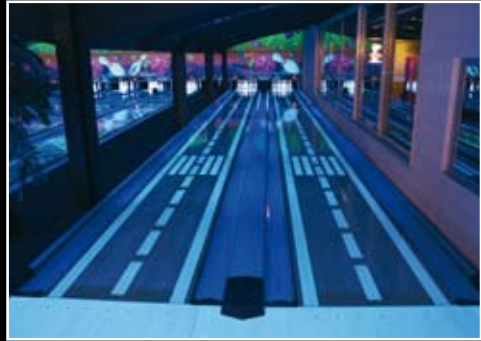

Thank you for assisting us in our quest to provide the best bowling experience possible for our customers.

John Losito, Proprietor
Sun Valley Lanes Lincoln, NE

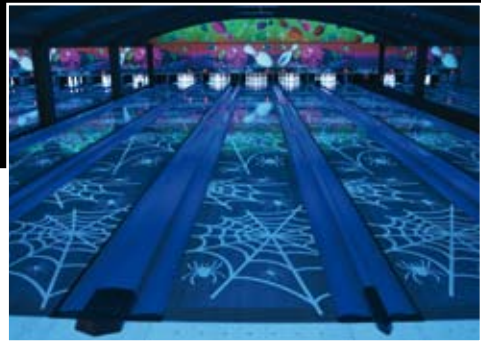

GET CREATIVE WITH MAD LANES, THE BIGGEST "WOW" EXPERIENCE IN BOWLING UNDER BLACK LIGHTS.

MAD Lanes deliver an unforgettable glow-in-the-dark bowling experience that your customers will find incredible, then return again and again to enjoy. Their unique, eye-popping look comes in two stunning designs that dramatically increase the entertainment value of your center's Xtreme bowling experience.

MAD LANES HIGHWAY DESIGN

Imagine your crowd in on Saturday night when you switch the lighting system over to UV to reveal these dazzling highway markings. Not only are they super fun to bowl on, they provide visual reference points for a player's ball delivery.

MAD LANES SPIDER DESIGN

Bowling just doesn't get any crazier than glow-in-the-dark lanes in the design of spider webs. These bright designs will grab the enthusiasm of all your guests. Want to up that enthusiasm even more? Install highway and spider designs on alternating pairs for a totally way-out-there look under black lights.

The look of a Traditional lane Under normal lighting

Under normal light, MAD Lanes synthetic surface looks just like natural wood lanes with all regulation markings.

UPGRADE YOUR LANES EVEN FURTHER

LIGHTED CAPPING

Customers love the bright excitement QubicaAMF Xtreme lighted capping brings to the game. You'll love their durability and ease of maintenance.

- Unbreakable, low-voltage and safe LEDs with 15 year life
- Easy to use controller
- A glow-in-the-dark mounting extrusion that easily fits your capping
- 16 patterns race both across and up & down the lanes
- Simple front desk controller

PIT LIGHTS

QubicaAMF dual pit lights are the most reliable way to enter the Xtreme game. These durable, rugged lights make it easier on you.

- Switch from white to black light and back automatically from front desk
- Light deck with invisible infrared light which scoring camera detects
- Prevent miss-scores due to black lights or fog
- Bulbs, wiring and front desk switch all included
- Available in 36" for QubicaAMF machines

RADARAY

QubicaAMF's Radaray Plus and Radaray XLi are the world's most trouble-free, cost-effective foul detectors. Both Radaray models are low power users, so they save you money. And both have the features you want and need.

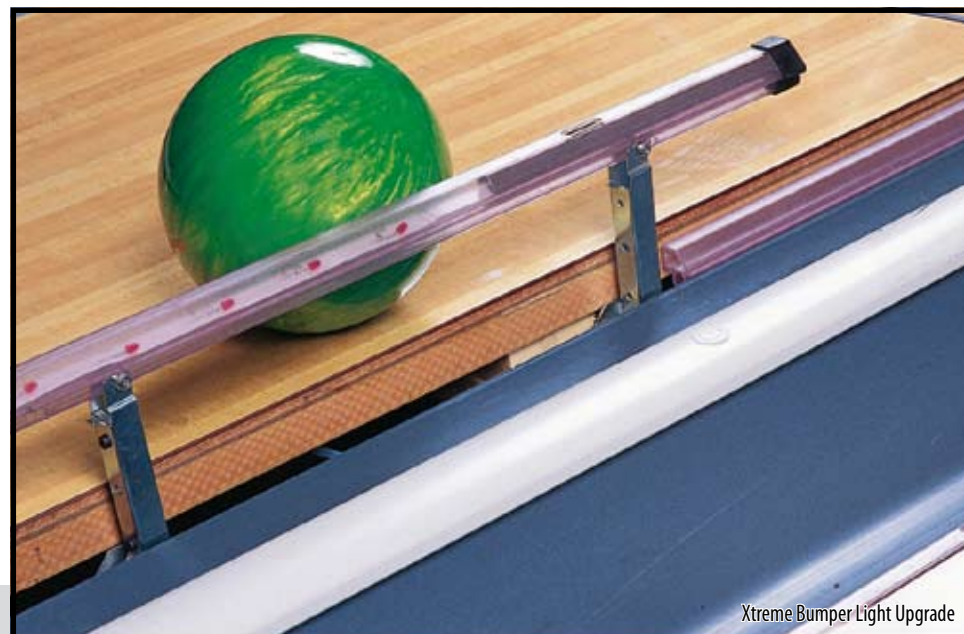

- Install easily on top of the approach and align quickly.
- Unit covers include LED foul indicators.
- Are not sensitive to ambient light or dust particles, eliminating false triggers.
- Are virtually maintenance free.

DURABOWL BUMPERS AND GUTTERS

It's the best bumper in the industry. That's because QubicaAMF's DuraBowl bumpers can more than stand up to kids thanks to their high-tech resin and durable construction. Install DuraBowl bumpers and you'll make the most of the bumper-bowling market from birthday parties, day-care specials and family events year after profitable year. DuraBowl bumpers deliver all the features you must have in a bumper.

- Strong, resilient rails
- Heavy gauge steel base and pivot arms
- Won't interfere with lane maintenance equipment
- Manual operation standard; automatic upgrade option available
- Xtreme bumper light upgrade available; works with bumpers up or down
- Bumper rails and gutters available in Brown, Blue, or Gray color options
- Available for tenpin and small ball
